

WHAT IS ED?

Erectile Dysfunction, ED, one of the most common conditions in middle-aged men, is the inability to get and keep an erection firm enough for sex. You are not alone if you suffer from ED. According to the American Urological Association, approximately 30 million men in the U.S. are afflicted with ED.

Male erection is a complex process that involves the brain, hormones, emotions, nerves, muscles and blood vessels. Sometimes a combination of physical and psychological issues causes ED. The American Urological Association reports that more than 80% of men who have ED attribute the condition to a physical problem.

If you think you have ED, or have been diagnosed with ED, ask us how UroWave Therapy could help you regain your sexual wellness without surgery or medications.

OUR UROWAVE THERAPY DOCTORS ARE BOARD CERTIFIED UROLOGISTS:

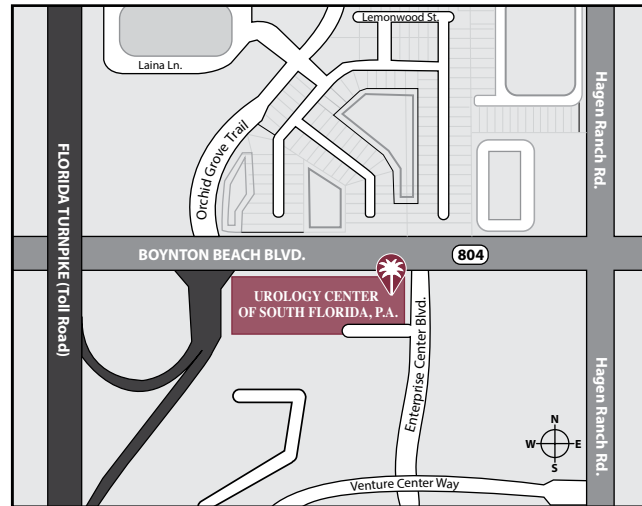

Joseph Biase, M.D.

Robert Gold, M.D.

Stuart Popowitz, M.D.

William Skinner, M.D.

RESTORE YOUR NATURAL ERECTIONS

UROWAVE THERAPY™

Enhance Sexual Performance

Obtain Spontaneous Erections

Painless In-Office Procedure by
Board Certified Urologists

Surgery-Free and Drug-Free

May Reduce or Eliminate the Need
for Prescription Drugs

UROWAVE THERAPY MAY BE THE ANSWER TO YOUR ED QUESTIONS...

UroWave Therapy brings back your ability to achieve natural, sustainable and spontaneous erections. It is a non-invasive, painless, long-term solution for ED that enhances penile rigidity, duration and sensation. Our board certified urologists apply the low intensity shock wave therapy to erectile tissue, resulting in new blood vessel formation and growth, renewal of nerves, and reduction of scar tissue.

BENEFITS OF UROWAVE THERAPY

- Enhance Sexual Performance
- Obtain Spontaneous Erections
- Painless In-Office Procedure by Board Certified Urologists
- Surgery-Free and Drug-Free
- May Reduce or Eliminate the Need for Prescription Drugs

SCIENCE BEHIND UROWAVE THERAPY

Using low intensity shock wave therapy to regenerate tissue has been used in many different fields since the 1980s. Within the last decade, shock wave therapy technology has been successfully proven to regenerate and restore erectile tissue. Scientific studies have shown that the increased blood flow, a result of this therapy, stimulates the growth and repair of new blood vessels, ultimately reversing ED.

In addition, after 15 years of use in Europe, shock wave therapy has been shown to be twice as effective as ED prescription drugs, with little to no side effects.

Q&A

How do I get started with UroWave Therapy?

One of our board certified urologists will conduct a thorough examination during your first consultation, including a review of your medical history.

How many treatments will I need?

Depending on your age, medical conditions, and other health factors, your treatment plan will typically include six appointments. Each appointment is one, 15-minute session per week for six weeks. There's no downtime or recovery needed after the procedure. Additional sessions may be required depending on your response.

When will I see results?

The majority of patients see results after the fourth treatment. Other erectile enhancement agents may be provided in combination with UroWave Therapy in order to enhance results.

Can I still take prescription ED drugs along with UroWave Therapy?

Yes. The addition of oral medication for ED will enhance the effectiveness of therapy.
